Cattlemen,

I would like to this opportunity to invite everyone to the 2012 West Tennessee Angus Sale, which takes place in Martin, TN on the campus of the University of Tennessee at Martin. This year's sale will be February 25, 2012 at 12 noon in the Smith Livestock Center.

Thanks for taking time to consider the sale offerings of the West Tennessee Angus Association Spring Sale. As you study the sale cattle, you have to appreciate the cattle that the consignors have brought to the sale for your consideration to purchase. This group of breeders has brought you a great set of genetics. Throughout this sale book, you will find most of the leading A.I. sires being represented in this year's sale. This sale also has a vast selection to choose from as well; many 3-in-1 pairs, bred heifers, bred cows, 2-in-1 pairs, and open heifers as well as a very stout set of breeding age bulls.

I want to thank the consignors for bringing together such a great set of cattle for this association sale. This group has always done a great job with this sale and this year is no exception. These cattle come to you representing an outstanding group of people that want their cattle to excel for you. I hope you find these cattle both functional and compatible for your cattle operation. Feel free to call on any of the consignors for information about the cattle or sale information.

I hope everyone is making plans to be with us on February 25, 2012 at 12 noon for another West Tennessee Angus Sale. If I can be of any assistance with the sale, please feel free to contact me. Hope to see everyone on the 25th.

Sincerely,
Charlie Rowlett

Bon View New Design 878 - His influence sells.

This War Alliance 9126 daughter brings to the sale a pedigree and EPD package that needs no help. Lass 757 001 is a bred heifer that makes a special sale attraction especially being bred to Dr D GM Objective 401 [Reg. #16558689]. This could be an unmatched mating, producing what possibly could be the next great herd sire. 9126 has also been checked to be safe in calf per Bio Tracking testing and was pasture exposed from 4/21/2011 to 9/10/2011.

Here is pure power in a calving-ease package. 014 combines the growth and carcass of Gardens Next Wave HE17 with one of the top-producing OMP cows. This is a two-year-old that can fit in anywhere and go right to work.

Notes

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

\$Value Indexes, are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

PRODUCTION

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height EPD (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight EPD (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height EPD (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

CARCASS

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value indexes are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

Weaned Calf Value (\$W), an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

Feedlot Value (\$F), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

Grid Value (\$G), an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

Quality Grade (\$QG) \$QG represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade. The carcass marbling (Marb) EPD contributes to \$QG.

Yield Grade (\$YG) \$YG represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

Beef Value (\$B), an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

WEST TENNESSEE ANGUS ASSOCIATION

Spring Sale

February 25, 2012 • Noon
Martin, TN • at the University of Tennessee

From Nashville, TN

Travel Interstate-40 west, exit the interstate at Highway 22 at Parker's Crossroads (Exit 108 north). Follow Highway 22 through Dresden, TN. When Highway 22 veers to the right on the outskirts of Martin, continue straight on Highway 431 into downtown Martin.

From Memphis, TN

Travel Interstate-40 east to Jackson, Tennessee, and exit the interstate at the Highway 45 By-Pass (Exit 80-B north). Follow Highway 45 to Martin.
